Z-Paster™100-20-11F Series is a high performance and compatible non-silicone material of the thermal conductive interface materials. The role

is to fill the air gaps between the heating elements and the heat dissipation fins or the metal base.

It applies to the liner based on silicone suitably. The flexibility and elasticity make it suited to the coating of the very uneven surfaces. Heat can transmit to the metal housing or dissipation plate from the separate elements or even the entire PCB, which in effect enhances the efficiency and life-time of the heat-generating electronic components.

Application

- » Cooling components to the chassis of frame
- » Car Battery & Power Supply
- » Charging Pile
- » Silicone-sensitive applications
- » Graphics Card Thermal Module
- » Set Top Box
- » Medical devices
- » LED
- » SFP optical module
- » Miniature heat tube radiator
